

HERBAL EXTRACT MANUFACTURING PLANTS

We manufacture a wide range of herbal extract manufacturing plants & equipments, especially for the following products :-

1. Medicinal plant extracts
2. Stevia extract
3. Essential oils
4. Oleoresins

Medicinal plants are the best source of a variety of new herbal drugs. Plant extracts contain phytochemicals, which have antimicrobial properties & are of great significance in therapeutic treatments. Important examples are aloe vera, ashwagandha & shatavari.

Stevia extract is a zero calorie sweetener of natural origin. It is the extract of dry leaves of the stevia plant. Its sweetening potency is up to 300 times that of table sugar. It has flavour similar to that of sugar, but with none of the side effects of artificial sweeteners. In addition to its role as a sweetener, it has excellent therapeutic properties.

Essential oils are volatile odoriferous oils of vegetable origin, such as eucalyptus,

lemon, orange, peppermint, rose, sandalwood, citronella, lemongrass, etc. Orange & lemon peels are a waste product of the fruit processing industry. Citronella & lemongrass are grasses capable of growing on arid land. These are cheap sources of raw materials, which can yield a significant quantity of valuable essential oils.

Spice oleoresins are the true essence of spices in their most concentrated form. They are spice or herb extracts containing volatile and non-volatile components, which intensify the aroma, flavour & colour of the food product. Important examples are cinnamon, clove, coriander, pepper, chilly, ginger, turmeric, etc.

We can execute above projects on a turnkey basis, where the scope of work would include design, supply, installation & commissioning of the manufacturing plant & complete manufacturing know-how for the product of interest.

Manufactured in India by :-
